EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- Paragraph [00170], on page 38 of the specification, in its entirety, has been moved to line 1, page 1 of the specification.

2. The following is an examiner's statement of reasons for allowance: It is found that the claimed feature of the plurality of the coils being mounted on the circuit board defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Claims 1-18 are allowed. Claims 13-18 have been rejoined since claim 1 is generic and is allowable.

4. For the record, a discussion of the most pertinent prior art is being included as followed. Kreuser et al. (USP 6,412,722) show a braking device for a dual bearing reel that brakes a spool 16 that is rotatively mounted on a reel unit, said braking device comprising: a spool braking unit that brakes the spool 16, the spool braking means

including a rotor element 60 that rotates together with the spool and includes a plurality of magnetic poles, as shown in figure 2, that are arranged around a rotational direction of the rotor element such that polarities of the magnetic poles are sequentially different, a plurality of serially connected coils 74 that are disposed around a periphery of the rotor element in the circumferential direction, and switch means 44 that is connected to both ends of the plurality of coils; and a spool control unit 44 that electrically controls the spool braking unit, the spool control unit including a circuit board 92 on which the switch means is mounted, the circuit board being mounted on a surface of the reel unit that faces one end surface of the spool, as shown in figures 3 and 4, and a control element 44 that is mounted on the circuit board, as stated in column 5, line 67 and column 6, line 1, wherein element 44 performs a multiple of tasks. Kreuser et al. lack the plurality of coils being mounted on the circuit board. None of the prior art teaches the concept of mounting the coils on the circuit board.

5. Holahan et al. is cited for the arrangement of the magnets 13, 14 and the switch 25 being mounted on the surface of the housing 7.
